PROJECT

Todo List Application - 2022

Create a sleek to-do list app by combining HTML for structure, CSS for styling, and JavaScript with Bootstrap for interactive elements, ensuring a seamless user experience

Wikipedia Search Application - 2023

Build a Wikipedia search application using HTML for structure, CSS for styling, JavaScript for dynamic functionality, and Bootstrap 5 to enhance responsiveness. This app enables users to seamlessly explore and retrieve Wikipedia articles, providing a user-friendly interface with modern design elements.

E-commerce (MERN) - 2023

Frontend: Responsive React components, user authentication, shopping cart management, and checkout process.

Backend: Node.js server with Express.js, MongoDB integration, RESTful APIs for CRUD operations, user authentication.

Admin Panel: CRUD operations for products, orders, and settings management.
